

ABOUT CAMTRONICS

Innovative camera solutions

Camtronics is a specialist in the development and manufacture of innovative sewer inspection camera systems. Camtronics offers a complete product range of sewer cameras with worldwide sales.

Innovation

Our continuous innovation enables our camera systems to keep up with the latest demands set by the extreme environments in which they operate. This makes our camera systems an essential part of any quality inspection.

In-house design and manufacture

We develop and manufacture all of our inspection cameras in our own workshop, which means we are able to respond to increasing market demands with great flexibility. Camtronics is your partner for customer-specific solutions for sewer cameras and inspection cameras.

Service and repair

Obviously, when you purchase one of our products that is not where it ends for us. Our own service department is there for you when you need prompt repairs. We also have a permanent supply of systems for hire so your downtimes are limited.

MiniFlex® The curving king

www.camtronics.eu

Cassette form

Innovative design

The traditional reel with case has been converted into a single cassette, creating a highly compact unit.

Ergonomic housing

Compact, light and strong

The housing is made of high-quality plastic with protective rubber caps, making it sturdy and impact-proof. The sensitive components are water-tight and protected in the middle of the construction. The cable drum is open so you can clean the cable easily. This guarantees user friendliness and makes the MiniFlex easy to store.

MiniFlex®

Your curving king

The MiniFlex has been specially developed for inspecting tubes and pipes with narrower diameters (32 mm to at least 100 mm) in, for example, sanitary areas such as bathrooms, kitchens and toilets.

The conical shape of the connecting piece makes it easy to push the camera head through several 90 degree bends. The bullet-shaped camera head provides a good camera image in larger pipes as well. The cable is 15 metres long, while longer lengths and guides are available as options.

- ✓ Unique conical connecting piece for many right-angle bends
- ✓ Bullet-shaped camera head
- ✓ For pipes from 32 to at least 100 mm
- ✓ Special wide-angle lens (100°)

- ✓ Interchangeable push rod with connecting piece

Monitor

TFT 5.6" with digital recording

The monitor has an integrated video and photo recording option for SD (USB) cards. It is extremely simple to operate. The MiniFlex comes as standard with a video-out facility, so you can always connect it to your own monitor or laptop, etc.

Complete standard model

Including several options
